

ABOUT THE ROLE

We are looking for a sharp, analytically driven Business Analyst with hands-on fintech experience to join our Hyderabad team. You will act as the critical bridge between business stakeholders and technology teams, ensuring complex financial products are translated into precise, executable requirements. You'll work on-site, collaborating daily with product, engineering, compliance, and operations.

WHAT YOU'LL DO

- Gather, document, and validate business requirements for fintech
- Conduct in-depth analysis of existing workflows, identifying gaps and proposing process improvements aligned with regulatory and business goals
- Translate business needs into detailed functional specifications, user stories, and acceptance criteria for engineering teams
- Act as primary liaison between product owners, developers, QA, compliance, and external stakeholders throughout the project lifecycle
- Produce data-driven insights using SQL, Excel, or BI tools to support decision-making and business case development
- Facilitate workshops, sprint planning sessions, and stakeholder reviews; own meeting documentation and follow-ups
- Monitor product delivery against requirements, conduct UAT, and ensure business sign-off before releases

REQUIRED QUALIFICATIONS

- 7+ years of BA experience, with at least 2 years in fintech or BFSI
- Strong command of SDLC methodologies — Agile, Scrum, or Kanban
- Proficiency in writing BRDs, FRDs, user stories, and process flow diagrams
- Working knowledge of payments (UPI, NEFT, IMPS, SWIFT) or lending systems
- Hands-on experience with SQL for data analysis and reporting
- Familiarity with tools such as JIRA, Confluence, Figma, or Visio
- Bachelor's degree in Engineering, Finance, Computer Science, or related field

NICE TO HAVE

- CBAP, PMI-PBA, or equivalent certification
 - Experience with API documentation and REST/GraphQL basics
 - Exposure to open banking, neo-banking, or embedded finance products
 - Knowledge of RBI sandbox regulations and SEBI guidelines
 - Prior experience in a product-first or startup fintech environment
 - Ability to interpret wireframes and work closely with UX teams
-

SKILLS & COMPETENCIES

- Exceptional written and verbal communication — you can simplify complex financial concepts for both technical and non-technical audiences
- Strong critical thinking and problem structuring under ambiguity
- Detail-oriented without losing sight of business objectives
- Collaborative team player who thrives in a fast-paced, delivery-focused environment
- Proactive stakeholder management and conflict resolution skills
